WORKBOOK
2019
The product information contained in this catalog was current at the time of printing.

Victorinox reserves the right to change specifications and designs without notice and without liability for such change.

“Victorinox, the famous Victorinox Cross and Shield, and “swiss Army” are trademarks owned by Victorinox AG and its affiliates.
CARL ELSENER
CEO Victorinox Group

Victorinox creates products which are designed to be true companions for life. Precise and elegantly engineered, our company is proud to represent the distinguished characteristics of our country through the manufacturing of the Swiss Army Knife. They are one of the key symbols of excellent Swiss quality and ingenuity. Still today, the core values upon which our business and manufacturing is based, are as relevant as they were in 1897 when Karl Elsener created the Original Swiss Army Knife: Functionality, innovation, iconic design and uncompromising quality. Victorinox products have accompanied people through life’s adventures since 1884. They are the ambassadors of our timeless Swiss values – as timeless as the models you will discover on the following pages.

Time is perhaps the most precious of all commodities. That’s why we create our timepieces with durability, elegance and razor-sharp precision. Our products are the result of the dedicated work of 2100 individuals who are part of the Victorinox family from around the world. It is the culmination of their contributions which make Victorinox products what they are: unique.

We are looking forward to writing the next chapter of our company history together. For your continued support and your dedication to our brand, I would like to express my sincere thanks.

Carl Elsener
CARL ELSENER
CEO Victorinox Group
1884
Karl Elsener opens a cutlery workshop in Ibach, in the Canton of Schwyz, with the support of his mother Victoria.

1891
Initiated by Karl Elsener, the Swiss Cutlery Union is founded. Karl Elsener and his co-workers deliver soldier’s knives to the Swiss Army for the first time.

1897
The name “Swiss Officer’s and Sport Knife” is legally protected on June 12. This model later becomes known around the world as the “Original Swiss Army Knife”.

1909
Following the death of his mother, Karl Elsener introduces the brand name “Victoria” in her honor. The company’s founder legally registers the distinctive emblem with the cross and shield as a trademark. It is now a registered trademark in more than 120 countries.

1921
The invention of stainless steel being of central importance for the cutlery industry, Karl Elsener coins the company’s new name, “Victorinox” by combining his mother’s name “Victoria” with “Inox”. (Inox is an abbreviation of the French word “inoxydable” which means stainless.)

1931
The Brown Boveri Company sets up the world’s first fully electric heat treatment facility for Victorinox.

1945
The “Original Swiss Army Knife” begins its successful progression around the world and is particularly popular in US Army PX stores.

1979
On January 2, the previously solely-owned “Messerfabrik Carl Elsener” is converted to the family-owned company “Victorinox AG”.

1984
The company doubles the size of its plant and office space with 810 employees generating revenue of more than CHF 80 million.

1989
Victorinox’s American distribution partner enters the timepiece market in the USA under the “Swiss Army Brands, Inc.” label and launches the brand’s first watches collection produced in Biel, Switzerland.

1992
The company opens its own sales subsidiary in Japan. Further subsidiaries follow in subsequent years.

1999
Victorinox enters the travel gear market, issuing a manufacturing license to the American TRG Group in St. Louis. Expanding its timepiece business, the company establishes Victorinox Watch SA in Bonfol, in Switzerland’s Jura watch-making region.

2000
The Victorinox Foundation is set up. It holds 85% of the shares in Victorinox AG. A further 15% are held by the charitable Carl and Elise Elsener-Gut Foundation.
2001
Victorinox apparel is introduced in the USA.
The first Victorinox Flagship store opens its doors to the public in New York’s trendy Soho district.

2002
The publicly traded US distribution partner Swiss Army Brands Inc. is privatized.
The timepiece brand Victorinox Swiss Army is launched internationally.

2003
Victorinox takes over the US-American company Wenger NA, including the fragrance label “Swiss Army Fragrance”.

2005
Victorinox takes over the traditional Swiss cutlery and watch manufacturer Wenger SA in Delémont in the Swiss Jura.

2006
Victorinox Swiss Army moves to its new watch production facility in Porrentruy, in the Swiss Jura, to meet increasing demand and to ensure high-quality timepieces.

2007
Victorinox sets up Victorinox Swiss Army Fragrance AG based at its head office. The former Wenger fragrance line is repositioned in the market and is branded with the Victorinox emblem.

2008
The company’s first European Flagship store opens on London’s New Bond Street.

2009
Geneva City hosts first Victorinox Flagship store in Switzerland.
125 years after its foundation, Victorinox now employs more than 1800 employees worldwide and generates revenues of around CHF 500 million.

2012
Launch of the first Victorinox Global Brand Campaign.

2014
To celebrate the brand’s 130th anniversary and the watches division’s 25th anniversary, Victorinox Swiss Army launches I.N.O.X. Designed and built to withstand unusual levels of stress, this watch has passed a battery of 130 tests certifying it is “forged to resist”.

2015
Victorinox Swiss Army moves to its new watchmaking competence center in Delémont in the Swiss Jura.

2016
Inauguration of the watch case production facility in Delémont.
BRAND VALUES
EACH VICTORINOX SWISS ARMY WATCH EMBODIES THE SPIRIT OF THE LEGENDARY ORIGINAL SWISS ARMY KNIFE, A UNIVERSAL SYMBOL OF FUNCTIONALITY, INNOVATION, QUALITY AND ICONIC DESIGN.

QUALITY
Victorinox Swiss Army produces its watches in its own workshops based on criteria that emphasize technical performance, so as to optimize usefulness and practicality. They meet the highest standards of the Swiss watchmaking industry. Before leaving the facility, each watch reference is certified after undergoing a battery of at least 100 tests. Among the most important tests are water resistance, temperature, corrosion, UV, traction and torsion, vibration and shock resistance, aging and wear. In addition to this long control process, they are also visually inspected between each manufacturing step. For these reasons, Victorinox Swiss Army watches have a three-year warranty. They are genuine precision instruments, modern and timeless in design, and built to last.

FUNCTIONALITY
All Victorinox Swiss Army watches are designed for maximum utility. Functionality is a focus for every aspect of the timepiece, from the dial, which should be easy to read, to the most sophisticated professional functions. All design details are based on their practical application. Functions are never mere additions or embellishments.

INNOVATION
The objective of Victorinox Swiss Army is to enrich its collections regularly with new design elements and innovative features, while seeking creative solutions for the updates of existing components.

ICONIC DESIGN
Victorinox Swiss Army watches are inspired by the Original Swiss Army Knife, which has become, over many decades, one of the world’s most recognizable objects of functional design. Sharing the same source of inspiration, both the watch and the knife symbolize the union between the history of Victorinox and its contemporary interpretations.

AUTHENTICITY
If it does not have our Cross and Shield emblem and Victorinox Swiss Army or Victorinox on the dial, it is not an authentic Victorinox Swiss Army watch. Ours are the only timepieces authorized by the Swiss government to carry the name Swiss Army.

3-YEAR WARRANTY
A minimum of 100 quality control tests allow Victorinox Swiss Army to offer a 3-year warranty!
The I.N.O.X. collection is engineered to endure a truly adventurous life. I.N.O.X. watches can handle extreme conditions such as a fall of 10 meters, being driven over by a 64-ton tank or a dive down to 200 meters. They were also designed to please the eye. Day or night, in the office or on a mountain, nothing beats the durable, versatile look of the I.N.O.X. collection.
I.N.O.X.

COLLECTION’S TECHNICAL SPECIFICATION

With reliability and precision in mind, we created the Airboss collection. It’s inspired by the actual Air Boss, the countdown commander of an aircraft carrier. He decides every take-off and landing time, a task requiring pinpoint accuracy. And that’s just exactly what you can expect from your Airboss watch.
COLLECTION’S TECHNICAL SPECIFICATION

Case
Ø 42 mm
Crystal: sapphire
Crystal specification: triple coated and anti-reflective
Water resistant to: 10 ATM/100 M/330 FT
See-through caseback
Screw-in caseback

Dial
Luminescent hands
Luminescent markers
Date
Applied numerals

COLLECTION’S KEY FOCUS POINTS

Military time printed under the crystal
Swiss made automatic movement
Fabric strap with iconic red stitching*
Diamond-cut striations on the dial tracks
See-through case back
Circular slide rule

* Depending on models

QUALITY & COMPONENTS
LEATHER
All Victorinox Swiss Army leather straps are specially cut, stitched and lined by expert craftsmen. Various tanning techniques provide different textures and feels for our cowhide or calfskin straps. We also ensure that none of the leather used in our straps is sourced from endangered species. It is always important to note that the colours and suppleness of leather are subject to change with time and exposure to external factors. Exposing it to daily showers or swims is not recommended. We recommend that customers who live a very active lifestyle, especially one involving frequent exposure to salt water and/or heavy perspiration, opt for a steel bracelet or rubber strap.

STAINLESS STEEL
The 316L stainless steel alloy used in Victorinox Swiss Army bracelets has strong antimagnetic properties and is optimized for toughness and corrosion resistance.

MILANESE MESH BRACELETS
Stainless steel Milanese mesh bracelets are available in the Infantry collection. They are flexible, thin and easy-to-adjust, enabling the owner to adapt the size of their own bracelet without the need for any specific tools.

PVD (PHYSICAL VAPOR DEPOSITION)
Victorinox Swiss Army uses PVD coatings and was one of the first watchmaking brands to apply the “Black Ice” PVD treatment color, setting a trend in the industry since then.

GENUINE RUBBER
Victorinox Swiss Army uses genuine high-grade rubber for its straps, a natural and extremely comfortable material with a silky finish that is as resistant to ageing as silicone.

BALLISTIC NYLON
Some Victorinox Swiss Army models are equipped with ballistic nylon straps, which also features in our most exclusive line of travel gear. It provides the ultimate in reliability and durability.

NATO INSPIRED STRAPS
NATO, or the North Atlantic Treaty Organization, has clear links to the military world. Our NATO-inspired straps are made from a single piece of textile woven from extra-resistant nylon fibre and cotton.

PARACORD STRAPS
The paracord strap is original, innovative and unique. Hand-woven from genuine American-Made Military grade MIL-C-5040H TYPE III certified parachute cord (highly resistant, multistrand nylon cord), it is the ideal companion for every adventure and expedition. Paracord straps can be unwoven and used for as many purposes as the wearer can possibly imagine.

SBB (Straps & Bracelets Base)
Our easy-to-use SBB references are available in our Media Centre and are regularly updated. This practical database enables you to find the strap reference your customer needs quickly (metal bracelet, leather, rubber, paracord or any of our available straps) and look up compatible straps for every watch SKU launched since 2005. Contact your Victorinox sales representative for information about how to download a digital version from our Media Centre.
Our watches comply fully with both European ISO standards and the Federation of the Swiss Watch Industry standards (NIHS). In addition, Victorinox has also introduced its own standards and internal tests. We self-monitor our production to ensure that each stage is mastered perfectly and our extensive certification controls continue until delivery. Victorinox Swiss Army also certifies each component that is brought in from external suppliers. The Victorinox Swiss Army Quality Team conducts at least 86 tests before certifying a design. The watches in the I.N.O.X. collection undergo 130 tests. Here is a list of the most important tests conducted on Victorinox Swiss Army watches:

QUALITY
VICTORINOX SWISS ARMY WATCHES ARE COVERED BY A THREE-YEAR LIMITED WARRANTY, WHICH EXCEEDS THE INDUSTRY AVERAGE. THE THOROUGH PROCESSES IMPLEMENTED BY OUR QUALITY TEAM ENABLES US TO OFFER THIS EXTENDED WARRANTY. VICTORINOX SWISS ARMY WATCHES ARE SUBJECT TO RIGOROUS TESTING AND NUMEROUS QUALITY CONTROLS BEFORE THEY ARE DISTRIBUTED.
CONFORMITY

Each component entering our production facility in Delémont in the Swiss Jura is checked to verify its dimensions, aesthetics, interchangeability, and physical and chemical resistance to guarantee its irreproachable quality. This process is implemented by our internal Development Team, who engineer the various components. All this occurs even before the production of a watch begins, thus ensuring a fully integrated process from the very start.

MECHANICAL & QUARTZ MOVEMENTS

Every movement endures stress and strain throughout its lifetime. To ensure all of our movements remain functional and accurate for as long as possible, Victorinox Swiss Army simulates watch wearing in its own quality lab to test every quartz, manual and automatic calibre equipping its watches.

WATER RESISTANCE

Victorinox Swiss Army watch cases are hermetically sealed using high-grade rubber gaskets and screw-in case backs to ensure that the movements are not exposed to moisture or dust. The Quality Team carries out individual and real-time water-resistance and water pressure tests up to 200 metres, depending on the watch model.

TEMPERATURE RESISTANCE

Heat chamber and humidity tests are performed on Victorinox Swiss Army watches to ensure they continue to function perfectly in the tropics. Low temperature tests are also conducted to check that the watch – and more specifically the mechanism – can withstand the climatic conditions encountered during the cold season.

CORROSION RESISTANCE

Perspiration, chlorine, soap, seawater, air pollution, and so on: these and other environmental factors can damage a watch’s components and materials. Victorinox Swiss Army performs a number of tests to ensure that the parts equipping its watches do not suffer wear or a loss of mobility due to exposure to corrosive elements. Neutrality and skin sensitisation tests are also conducted on all components that come into contact with the skin, including cases, stainless steel bracelets, leather, rubber and leather.

UV RESISTANCE

Intense light and sunlight can damage many materials used in watches, such as coatings, synthetic elements, rubber and leather. Rigorous testing is thus performed on these materials to ensure their durability. Certification is only granted by our Quality Team if no signs of ageing are observed during these tests.

TRACTION/TORSION RESISTANCE

Buckles on leather straps and clasps on steel bracelets must withstand constant use during a watch’s lifetime. Victorinox Swiss Army submits all of its watches to traction and torsion tests, with a particular focus on attachment pins to ensure that they can resist any accidental snagging.

VIBRATION RESISTANCE

Everyday wrist movements and sports such as cycling, jogging, horse riding or skiing can affect the performance, quality and accuracy of a watch. To prevent this, special machines put Victorinox Swiss Army watches through more severe vibrations than they would ever experience on even the most active of wrists. If a watch or any of its components does not survive this ordeal, it is not certified.

SHOCK RESISTANCE

A number of severe shock-resistance tests are performed on Victorinox Swiss Army watches. Heavy impacts – such as the equivalent of a severe collision with a wall, for example – are reproduced in the lab. Appropriate instruments later check that no mechanical damage has occurred during these tests.

AGE RESISTANCE

Victorinox Swiss Army watches are function-tested to simulate the ageing process. Moving parts such as push-pieces, crowns and bezels are turned and manipulated in a manner that replicates several years of normal use.

ABRASION RESISTANCE

The Quality Team conducts intensive abrasion tests, particularly on the cases, bracelets and straps, to ensure that our watches can be worn in all situations without suffering premature wear during their lifetimes.

VISUAL AND MANUAL TESTING

In addition to these mechanical tests, every Victorinox watch is visually checked by a member of the Quality Team between each manufacturing stage to ensure its overall quality according to our own Victorinox Swiss Army standards. If a watch does not pass this visual inspection, it is verified and repaired. Any creation that does not pass our quality checks will be discarded.
STAINLESS STEEL
The 316L stainless steel alloy used in Victorinox Swiss Army cases and bracelets has strong anti-magnetic properties and is optimised for toughness and corrosion resistance. The 316L stainless steel we use complies with the nickel migration limits imposed by the European REACH Regulation.

PVD (PHYSICAL VAPOR DEPOSITION)
Widely used in watchmaking, PVD is a high-performance, pollution-free and non-allergenic technology that is also employed by the aeronautic industry. The process involves adding a titanium coating to stainless steel by condensing a metal vapour in a partial vacuum, thus circumventing electrolytic and chemical processes. Victorinox Swiss Army also implements a special process for watches with hints of gold: a thin layer of gold powder is added after the surface is treated PVD, providing a longer-lasting finish than conventional gold-plating.

SAPPHIRE CRYSTALS
All Victorinox Swiss Army watches are fitted with a scratch-resistant crystal glass cut from a polished slice of solid sapphire. Each one is triple-coated with an anti-reflective treatment on the internal side for enhanced legibility.

GENUINE MOTHER-OF-PEARL
Resilient and iridescent, genuine mother-of-pearl features in several Victorinox Swiss Army dial designs. Genuine mother-of-pearl is produced inside the shells of certain molluscs, meaning that each dial adorned with mother-of-pearl is utterly unique.

BATTERIES
Victorinox Swiss Army equips its quartz watches with mercury-free batteries in compliance with global regulations and standards. This positive step towards environmental sustainability has no effect on either the precision or efficiency of a quartz watch. Each battery has an estimated lifespan of 2 years.

LUMINESCENCE
This technology, branded as Super-LumiNova®, offers enhanced brightness in low-light conditions thanks to a non-radioactive and non-toxic substance. Victorinox Swiss Army uses Super-LumiNova® for any highly functional features of its watches, usually applying it to components such as the hands, numerals or bezel-markers, etc.

MOVEMENTS & ELECTRONIC MODULES

MOVEMENTS – All movements used in our watches are SWISS-MADE. We mainly use the following two suppliers:

ETA: This company has over 200 years of experience manufacturing quality movements. ETA calibres mainly equip our mechanical watches and some of our quartz chronographs.

RONDA: This firm is one of the world’s leading manufacturers of highly innovative and precise electronic watch movements. RONDA movements equip a great deal of our watches. In addition, Victorinox Swiss Army incorporates exclusive Swiss-developed and -made electronic modules into certain watches, such as the Night Vision.
KEEPING A VICTORINOX WATCH LOOKING ITS BEST AND WORKING PERFECTLY REQUIRES REGULAR SERVICING. ONLY AUTHORISED VICTORINOX SWISS ARMY CUSTOMER SERVICE CENTRES ARE ABLE TO ENSURE THE WORK CARRIED OUT MEETS OUR STANDARDS OF EXCELLENCE.

- Each watch sent to an authorised Victorinox Swiss Army (VSA) Customer Service Centre is handled by a professional watchmaker.

- A diagnostic is performed and a detailed cost estimate is established, free of charge (for watches that are no longer under warranty), which is submitted to you before any repairs are carried out.

- Once you have accepted the cost estimate, our watchmakers will implement all the necessary procedures, including the replacement of any worn or defective components.

Victorinox Swiss Army guarantees the availability of spare parts for 10 years after production has ended. After each service, your watch will be returned to you with a one-year warranty on the work carried out.

CUSTOMER SERVICE

COMMITMENT TO THE HIGHEST CUSTOMER SATISFACTION IS ONE OF THE MAIN ENTREPRENEURIAL VALUE THAT CHARACTERISE VICTORINOX. ACHIEVING THIS GOAL IS THE UNIQUE AND ULTIMATE MISSION OF OUR INTERNATIONAL CUSTOMER SERVICE TEAM IN SWITZERLAND, OUR 70 GLOBAL SERVICE CENTRES AND OUR 200 CUSTOMER SERVICE REPRESENTATIVES, WATCHMAKERS AND TECHNICIANS AROUND THE WORLD.
OUR MAINTENANCE SERVICES
AFFRONTING DAILY LIFE AS WELL AS SKIING, WATER-SPORTS AND SUDDEN VARIATIONS IN TEMPERATURE, A VICTORINOX WATCH REQUIRES CARE AND MAINTENANCE TO ENSURE ITS RELIABILITY AND TO DELIVER ON ITS PROMISE OF ACCOMPANYING YOU ON YOUR EVERYDAY ADVENTURES.

Three types of services are available at any of our authorised VSA Customer Service Centres.

► We strongly recommend a water-resistance test once a year, especially before a holiday when your watch is put under particular strain.

► Every two years, we recommend a maintenance service. This will ensure that:
  - your watch is completely water-resistant (it is dismantled, all the gaskets and the crown are replaced if necessary, the case is cleaned, and so on.)
  - the movement works correctly (the battery is changed in a quartz watch, mechanical movements are checked and adjusted)

► Every four to six years, depending on the model of your watch, your personal use and the local climate, we recommend a complete overhaul. This involves:
  - A comprehensive revision of the movement (it is dismantled, the functions are checked, any worn components are replaced, etc.)
  - Water-resistance and accuracy are also carefully verified.

OUR ADVICES FOR TAKING CARE OF YOUR VICTORINOX SWISS ARMY WATCH
LIKE ALL QUALITY PRODUCTS, VICTORINOX SWISS ARMY WATCHES REQUIRE ATTENTION AND CARE. FOLLOWING A FEW BASIC RECOMMENDATIONS WILL PROTECT YOUR WATCH OVER TIME.

► Water-resistance
To prevent any infiltration of water or dust, all watches (quartz or mechanical) should have their water-resistance checked every year by an authorised VSA Service Centre. We recommend conducting this test before the summer or before going on holiday, as this is when your watch is particularly exposed to water pressure and strong variations in temperature.

► Mechanical movements
An automatic or hand-wound movement is a miniaturised engine running 24 hours a day, 7 days a week. To sustain its accuracy (between -2 and +20 seconds per day), it needs regular maintenance and checking. We recommend that customers have the movements of their watches serviced every four to six years.

► Condensation
A sudden change in temperature may cause condensation to appear beneath the crystal. This will not affect the watch’s functions and will soon disappear on its own. Nevertheless, it indicates a weakness in the watch’s water-resistance and we strongly advise you to take your watch to an authorised VSA Customer Service Centre.

► Cleaning
To preserve the appearance of your watch, clean the case and bracelet regularly in slightly soapy water, then rinse in fresh water and dry with a soft cloth. Leather is a noble, evolving material. When it gets wet, it tends to lose its suppleness and colour. If possible, avoid frequent immersion in water and daily showers. When the watch has been in salt water, it should be carefully rinsed in fresh water and dried as soon as possible.

► Shocks
Avoid impact, drops and repeated friction that could abrade the metal and affect the watch’s mechanism. We recommend removing your watch before playing sports such as tennis, squash or golf and avoiding contact with chemical products, exposure to high temperatures and strong magnetic fields.

</table>
Power reserve: indicative value provided by the movement manufacturer

**General:**
- \( D = \) Dial / \( C = \) Case / \( S = \) Strap

**Dial finish:**
- \( DC = \) Diamond-Cut / \( CB = \) Circular Brushed / \( MOP = \) Mother-Of-Pearl / \( MAT = \) Matt / \( GRY = \) Grainy / \( OPN = \) Opalin

**Case material:**
- \( SS = \) Stainless Steel / \( Carb = \) Carbon / \( Tita = \) Titanium

**Example:** 241507 - Airboss D gray D C SS S brown leather = Airboss dial gray diamond-cut, case stainless steel, strap brown leather
